DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 are allowed over the prior art of record.

2. The following is an examiner's statement of reasons for allowance:

As per the independent claims, the claim limitations pertaining to encoding phase information with select sinusoids during signal transition and recombining the information with the original audio encoded information, is not explicitly taught by the prior art of record.

As an example of the prior art of record, Imai et al (5864800) teaches band splitting filter (Fig. 10, subblock 38) wherein the first component represents the original signal (Fig. 8, the + input to the adder is the original component), using a feedback signal containing a noise shaped portion of the original signal is used to generate a noise filtered original signal (output of Fig. 10 subblock 15), and reassembling the encoded data (Fig. 12, col. 12 lines 15-55). However, neither the Imai reference nor the prior art of record fairly suggest or teach the claim scope of the independent claims as noted above. Furthermore, it would not have been obvious to one of ordinary skill in the art of signal processing to modify the teachings of the prior art of record to obtain the recited claim limitations of the independent claims as noted above.

3. The drawings filed on 9/23/98 are subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948. In order to avoid

abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.
